Sampling

1. Sampling from 100% of the bags. Samples are to be taken from each bag.
2. 5% of the bags in the assaying lot subject to minimum 5 and maximum 10 bags randomly selected from each assaying lot will be cut open, contents spread on the floor and visually checked for presence of any material foreign to the commodity like stones, any plastic material or any substance which is not directly related to the commodity being sampled. Presence of these materials such as large pieces of pebbles, inferior quality or husk in the middle of bag, mixing of any apparent material which is not the actual commodity itself, if any will lead to rejection of the lot being sampled.

Further a sample from the bags cut open will be taken and checked for foreign matter. The FM content higher out of the two values determined on the basis of the composite sample taken from the running sample as indicated in para 1 above and the sample collected as per the process indicated in para 2 will be entered in the assaying report. This is then divided into 4 parts

These samples will be distributed as under:

- One sample to Depositor
- One sample to Warehouse service provider
- One sample for Analysis by assayer
- One sample for record with assayer

Moisture adjusted weight

Depositors whose goods are having moisture above the basis point will get electronic credit for the quantity bought less the standard deduction and further with reduction in weight by discount for moisture as defined in the contract specifications and product note. The weight after deducting standard deduction and moisture discount (by weight) will be credited to the depositors E-Repository a/c by warehouse service provider.

Following steps will be followed for deduction of standard deduction and Moisture adjusted weight:

Step 1: Gross weight (W1) Inward = Gross quantity (i.e. after deducting the tare weight of the truck) – Standard deduction

Step 2: MAW Deduction: Quantity to be entered in E-Repository (W2) = W1 – Moisture % above basis (but <= max permissible) *W1/100

W2 will be the quantity that the WSP will mention as Gross quantity at the time of fresh deposit.

It may be clarified here that the lot being deposited should remain a deliverable lot even after deduction of standard allowance both the time fresh deposit and reduction due to moisture being higher than the basis moisture as illustrated below:

Weighbridge net weight at the time of deposit	Standard Allowance	Moisture (basis and maximum as per contract specifications)	Actual moisture at the time of fresh deposit	Weight of lot credited into beneficiary account	Good/Bad delivery

Case-1					
9.9 MT	0.2% (Fresh deposit)	12% and 13%	13%	9.78	Not Deliverable
Case-2					
10 MT	0.2% (Fresh deposit)	12% and 13%	12.5%	9.93	Deliverable
Case-3					
10 MT	0.2% (Fresh deposit)	12% and 13%	13%	9.88	Deliverable
Case 4					
10.35 MT	0.2% (Fresh deposit)	12% and 13%	13%	10.23	Not Deliverable

Weight at weighbridge during fresh deposit	Basis moisture level	Inbound moisture results	Standard Allowance	MAW	Credit to the beneficiary
100 MT	12%	12.50%	0.20%	0.50%	99.3 MT
		Outbound moisture			Quantity to be delivered by WSP to Buyer
		11% (lower than basis)			99.3 MT
		12% (at the basis)			99.3 MT
		12.50% (higher than basis)			99.3 MT + 0.50% if the discount for moisture is provided on 1:1 basis in the contract specifications

Warehouse has to deliver entire withdrawn quantity provided the lifting is done by EDD and the outbound

moisture level is at basis point or below: Since the buyer will be buying the goods at basis moisture level after application of MAW at the time of deposit, if at the time of delivery out, the moisture level is higher than the basis moisture levels, the WSP has to also deliver the buyer the difference quantity proportionate to the higher moisture content.
